Problem

- 1.) Malnutrition among children and food-insecure families.
- 2.) Obesity and lifestyle-related diseases among adults.
- 3.) Lack of personalized, affordable, and practical meal planning solutions.

Existing Alternatives

- Generic diet plans and free online nutrition tips.
- Traditional meal planning apps without AI personalization.
- Government feeding programs and school-based nutrition initiatives.

2.) Obesity and lifestyle-related diseases among adults.

3.) Lack of personalized, affordable, and practical meal planning solutions.

- Generic diet plans and free online nutrition tips.
- Traditional meal planning apps without AI personalization.
- Government feeding programs and school-based nutrition initiatives.

Solution

- AI-powered meal planning app that personalizes diets for individuals, families, and schools.
- Integration with local food availability and affordability.
- Progress tracking and health monitoring to assess improvement over time.

- AI-powered meal planning app that personalizes diets for individuals, families, and schools.

- Integration with local food availability and affordability.

- Progress tracking and health monitoring to assess improvement over time.

Key Metrics

- Number of active users (daily/weekly).
- Retention rate and engagement time.
- User health improvement data (BMI, weight trends).
- Number of partnered schools and communities.

- Number of active users (daily/weekly).

- Retention rate and engagement time.

- User health improvement data (BMI, weight trends).

- Number of partnered schools and communities.

Unique Value Proposition

EatWise removes the guesswork in meal planning, adapting to user needs, health goals, and local food resources.

High Level Concept

EatWise integrates technology and nutrition to promote global health equity — a smart, AI-powered platform that makes healthy eating affordable, accessible, and personalized for every family, school, and individual.

EatWise removes the guesswork in meal planning, adapting to user needs, health goals, and local food resources.
